

■ ICT Daily Trading Plan

A structured daily plan to apply all key ICT concepts — liquidity, FVGs, OBs, Power of 3, Turtle Soup, and CRT — across any market.

■ 1. Pre-Market Preparation (Before London Open)

- Mark previous day's High, Low, Open, Close, and Midpoint (50%).
- Identify external liquidity – has price taken out prior day/week high or low?
- Determine Daily Bias using higher timeframe structure and premium/discount levels.
- Example: If price swept previous day's high, tapped a 4H OB in premium, and closed bearish → bias = SHORT.

■ 2. Killzone Analysis (Execution Windows)

- London Killzone: 2 AM – 5 AM New York time.
- New York Killzone: 7 AM – 10 AM New York time.
- During these windows, look for liquidity sweeps and reversals near key highs/lows.

■ 3. Setup Selection (After Liquidity Sweep)

- ■ Turtle Soup: Sweep of previous high/low + sharp reversal + FVG/OB confirmation.
- ■ Clean Range Theory (CRT): Breakout and liquidity grab outside a clean range, then re-entry.
- ■ Power of 3: Accumulation → Manipulation (liquidity grab) → Distribution (expansion).

■ 4. Execution Framework

- Wait for liquidity sweep in killzone.
- Confirm displacement in bias direction.
- Mark FVGs and OBs in displacement.
- Enter on retracement into those zones.
- Stop Loss: below/above sweep candle.
- TP1: opposing liquidity, TP2: next PD array.

■ 5. PD Array Reference

- In Premium: OBs, FVGs, old highs → short.
- In Discount: OBs, FVGs, old lows → long.
- During expansion: trade imbalance fills.
- During retracement: return to equilibrium (50%).

■ 6. Risk Management

- Risk per trade: 1–2% maximum.
- Target RR: 1:3 or better.
- Avoid overtrading in same session.

■ 7. Review & Journal

- Take screenshots with annotations: liquidity swept, model used, PD arrays respected.
- Ask: Did I follow bias? Was displacement valid?
- Track RR and emotional discipline daily.

■ Example Daily Flow

- 12 AM – 2 AM: Mark bias & liquidity.
- 2 AM – 5 AM: London Killzone entry window.
- 5 AM – 7 AM: Pause & review.
- 7 AM – 10 AM: NY Killzone setup.
- 10 AM+: Manage trades & journal results.
